HOW TO INTERPRET YOUR SCORES

Upper and Middle level SSAT scores

Scores are calculated by awarding one point for each correct answer and subtracting one-quarter of one point for each incorrect answer. Points are neither awarded nor subtracted for questions left unanswered.

How are my scores calculated?

We provide score ranges to emphasize the possibility of small score differences if you had taken a different edition of the test instead of the one you took, accounting for changes in difficulty and different editions of the test.

A statistical approach called "equating" is used to adjust for these differences. Even after these adjustments, no single test score provides a perfectly accurate estimate of your proficiency.

For more information about the SSAT and to take a free practice test, please visit our website: www.ssat.org/practice.

What does "Not Answered" mean?

Questions not answered include both skipped questions and questions not reached. The number of correct, incorrect, not answered or not reached questions should not be compared between different test takers. These not only depend on the test takers ability but also on the difficulty of questions.

What do percentiles mean?

SSAT percentiles have range from 1 to 99, indicating that your scaled score was equal to or higher than the percentage of other test takers shown. If you are concerned that your percentile is lower than other scores, that may be because the SSAT test takers are a small & highly competitive group of students who plan to go the world's best independent schools
